## 01 / INTRODUCTION

### About Our Company

Moonlight Molds, Inc. manufactures architectural cast products including, but not limited to, decorative columns, cove moulds, cornices, crown moulds, ceiling domes, light troughs and ceiling vaults.

Our interior products are made of GRG (Glass Reinforced Gypsum). GRG is a high strength composite material that is lightweight and nonflammable. Our GRG products are designed to install easily using conventional drywall techniques, tools and attaching hardware.

We produce exterior products cast in FRP (Fiberglass Reinforced Plastic), GFRC (Glass Fiber Reinforced Cement) and Precast Concrete. FRP and GFRC are a lightweight, thin shell product which can be cast with a paint grade finish or supplied with an integral color and/or texture. Our GFRC products weigh about as much per square foot as a typical stucco wall. This allows our cast shapes to be attached to framing systems that are designed to carry the weight of portland cement plaster.

Moonlight Molds, Inc. has been supplying quality products to the building industry since 1984. We have worked on a wide assortment of projects varying from monumental high-rises to single family residences. Our manufacturing facility is located in Gardena, California with over 279,000 square feet of office, production, storage and yard space. Our products can be shipped to virtually any destination via truck, container, air freight, etc.

We supply top quality products and service. Extensive testing has been done on our products ensure we are meeting or exceeding industry standards. All of our products are shipped in custom built crates to ensure safe transport and easy jobsite storage. Shop drawings describing attachments, reinforcements and our products relationship to surrounding construction are provided for every project we supply.

At Moonlight Molds, Inc., we are dedicated to helping our industry as a whole. We are currently members of the CISCA/AWCI GRG Committee. The GRG Committee is a group of manufacture and contractors devoted to educating and informing the construction industry about GRG products. We are also members of CSI (The Construction Specifications Institute) and local construction associations.
